DELIVERING BEYOND COMPLIANCE

# U-value Calculations Checklist

This checklist has been carefully crafted to obtain the necessary information for performing your required services. Failure to supply this information to your energy assessor may result in time delays. Please take the time to read each required element and watch any helpful videos, along with using any download links to assist in your project.

As always, we are here to Deliver Beyond Compliance.

## U-value Calculations Checklist

### 1. Build specification for all heat loss areas to be modelled

This should be a layer-by-layer description of all the building materials used, including thickness of each material, make and model of any insulation, any air spaces, and any 'bridging' or breaks within the insulation layers (such as where insulation is installed between rafters.) We use all of this information to calculate heat loss.
