DELIVERING BEYOND COMPLIANCE

Water Efficiency Calculations Checklist

Comprehensive

This checklist has been carefully crafted to obtain the necessary information for performing your required services. Failure to supply this information to your energy assessor may result in time delays. Please take the time to read each required element and watch any helpful videos, along with using any download links to assist in your project.

As always, we are here to Deliver Beyond Compliance.

Water Efficiency Calculations Checklist

Comprehensive

1. Address

We use this to produce the report and find rainfall data if there is a rainwater collection system.

2. Floor plans

We use these to determine how many bathrooms and water consuming fittings there are in the property, and the roof collection area if there is a rainwater collection system.

2. Water consuming fittings

Make, model, and flow rates of all water consuming fittings, including: WCs, showers, basin taps, bath capacity, kitchen and utility taps, washing machines, dish washers, and any water softening systems.
